*NEW* Summer Research Experience for Undergraduates

Fostering Advancement & Careers through Enrichment Training in Science (FACETS)
June 16 - July 11, 2014 in Boston, MA

Applications due March 15, 2014

About Harvard School of Public Health's New Summer Program, FACETS

This 4-week summer program, June 16 - July 11, 2014 is the first school-wide program for undergraduates at HSPH. Students are able to select the department(s) that interest them most and will work on a group research project with a faculty mentor in the related field.

In addition, participants will receive introductory coursework in biostatistics and epidemiology, formal lectures from faculty members across the school, and networking opportunities with attendees from departmental summer programs at HSPH and across Harvard University.

The program includes travel, stipend and

**About Harvard School of Public Health**

The field of public health is inherently multidisciplinary. So, too, are the interests and expertise of the School's faculty and students, which extend across the biological, quantitative, and social sciences. With our roots in the basic sciences, we are able to confront the most pressing diseases of our time-AIDS, cancer, and heart disease-by adding to our knowledge of the biological, chemical, genetic, and societal forces underlying disease. We offer nine areas of study: biostatistics, environmental health, epidemiology, genetics & complex diseases, global health & population, health policy & management, immunology & infectious diseases, nutrition, and social & behavioral sciences.
